# Features

## Communicator GO Meeting Module

Our newest feature, the Communicator GO Meeting Module, provides both Communicator and Meeting in one application.

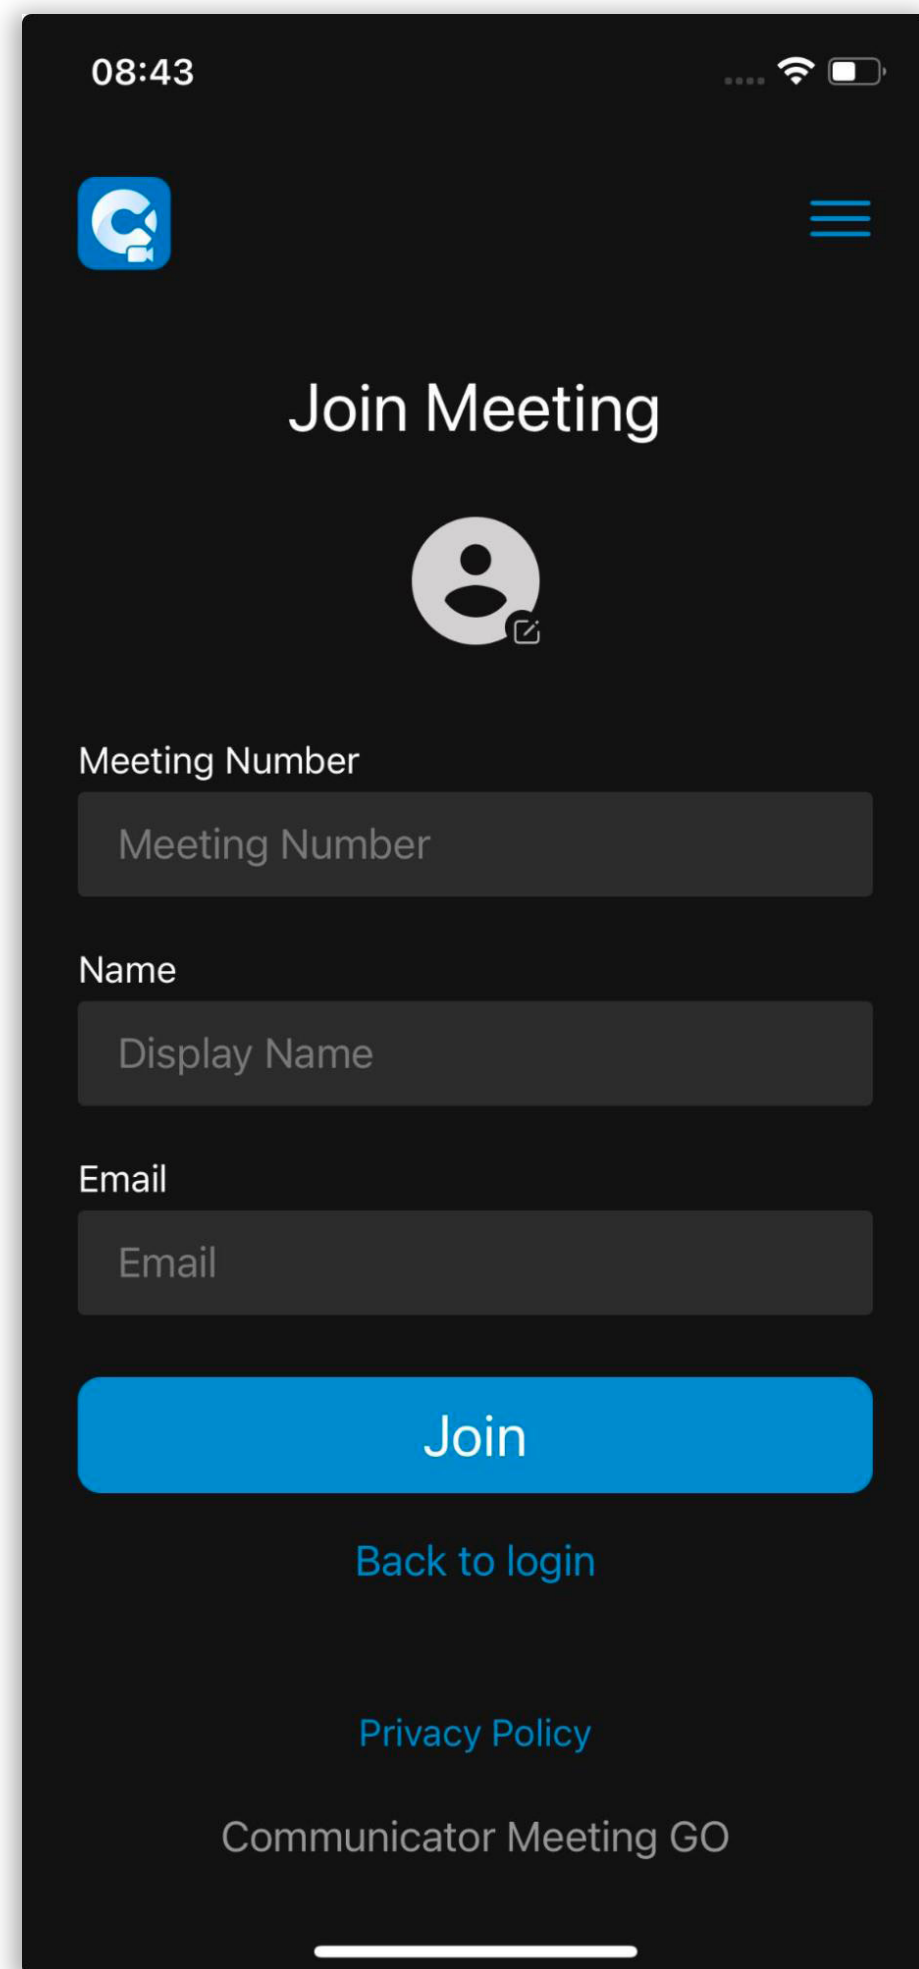

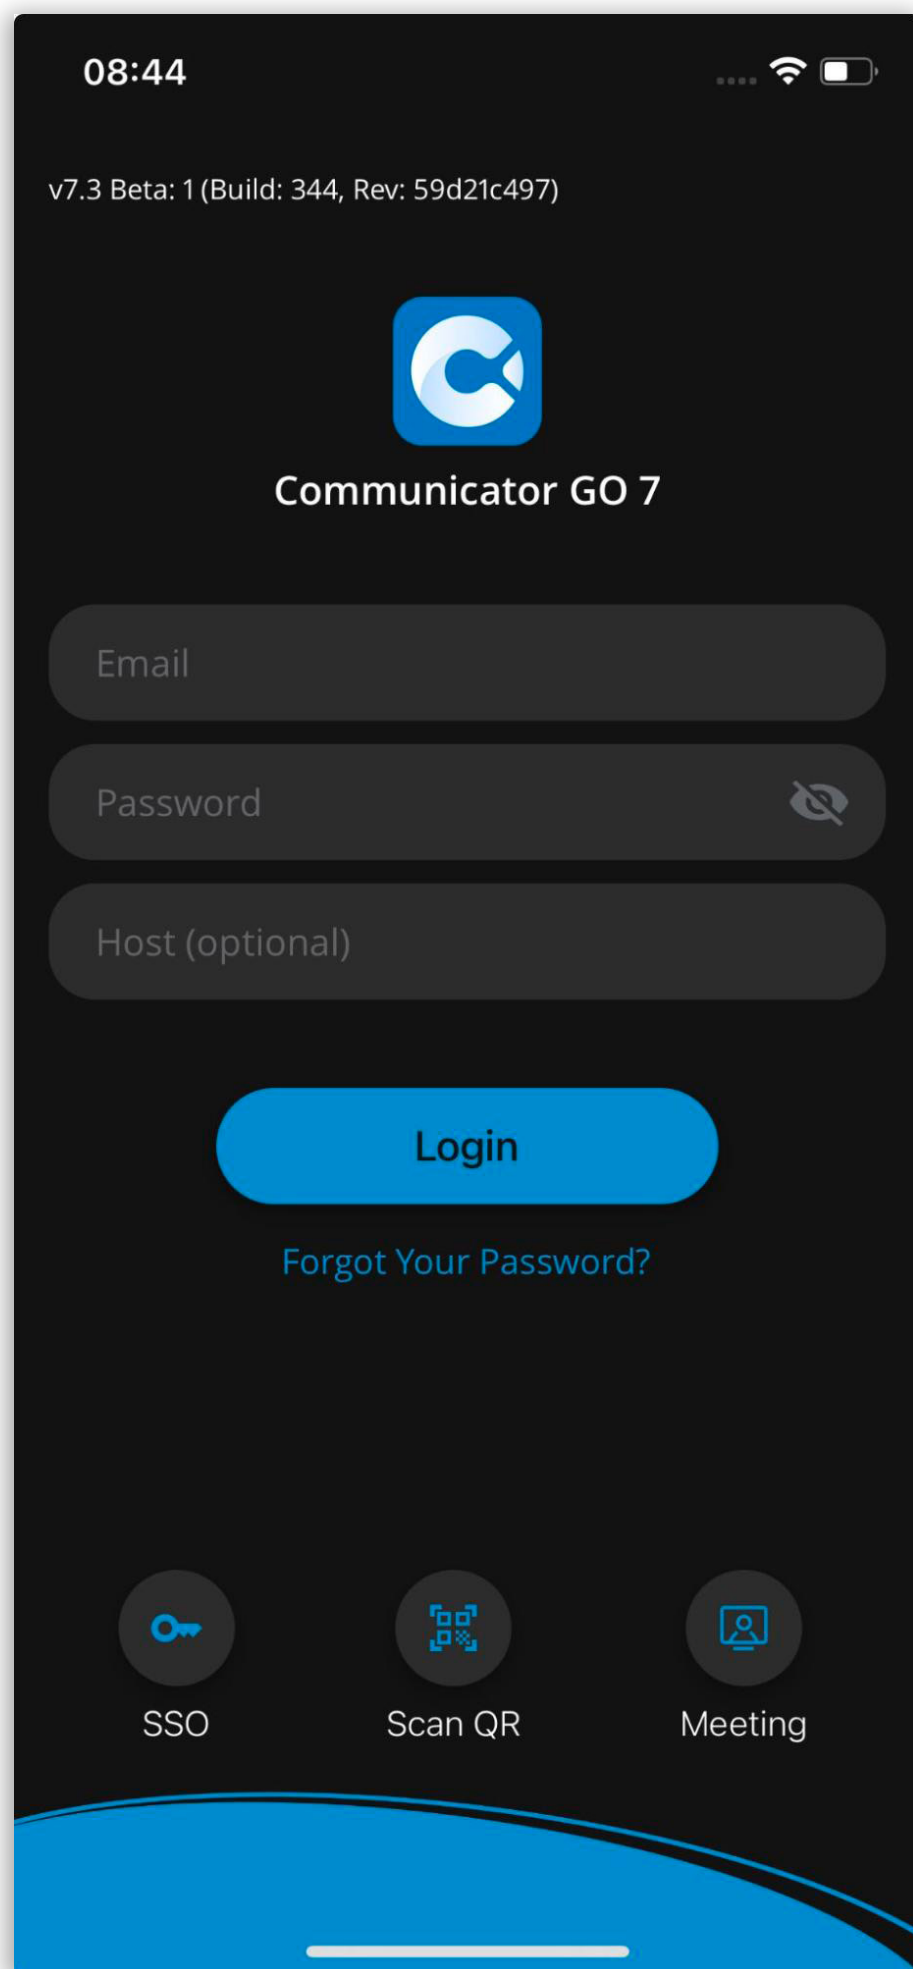

When users create and start a Meeting in the Communicator GO app, the Meeting window opens directly, without requiring the launch of another app like in previous versions.

Participants now have the ability to close the Meeting screen and use other applications while remaining connected to the meeting. This allows for seamless multitasking and increased productivity during meetings.

The login screen has an option that enables users to log into a meeting as a guest without having to log into the Communicator GO app by simply providing a meeting number, name, and email.

# Show chat history in the previous meetings list

This feature enhances the user experience by providing easy access to past meeting information and displaying all messages exchanged during each session in Chat Records.
